## EDUCATION

**Admas University**
BSc, Computer Science
Graduated March 2026
GPA 3.63 — Great Distinction
National Exit Exam: 69/100 — March 2026 GC

## SKILLS

Web application development · REST API design & integration · PostgreSQL · Database design · C# / .NET 10 · ASP.NET Core · Entity Framework Core · Angular · TypeScript · JavaScript · SignalR (real-time) · Git · JWT & Identity · Role-based access · Clean Architecture · CQRS · Automated testing (xUnit / Vitest / Playwright)

## SOFT SKILLS

Communication · Teamwork & Collaboration · Problem-Solving · Self-Directed Learning · Time Management · Attention to Detail

## QIYAS TRAINING

**Qiyas Fullstack Development Training**
May 21 – Sep 24, 2026
C# 14/.NET 10, TypeScript, Git, ASP.NET Core, EF Core, PostgreSQL

## CERTIFICATIONS

**JavaScript Algorithms & Data Structures**
freeCodeCamp, 2025

**Responsive Web Design**
freeCodeCamp, 2024

## LANGUAGES

Amharic — Native
English — Professional

## REFERENCES

Available upon request

**Computer Science Graduate — Software Development & Applied Digital Solutions**

## PROFILE

Computer Science graduate (BSc, Admas University, March 2026, GPA 3.63 — Great Distinction) who builds working software end to end: web applications, REST APIs, dashboards and real-time, data-driven tools on PostgreSQL, backed by automated tests. Completed the Qiyas Fullstack Development Training (May – Sep 2026) and delivered three projects, with hands-on ownership of the API, database and security layers as well as Angular front ends. Comfortable with Git, learning new technologies independently, and working in a team to ship prototypes. Keen to apply digital technologies, including AI model and API integration, to practical engineering and development challenges, and to grow through applied R&D and collaboration with partners. Available immediately.

## PROJECTS & WORKING PROTOTYPES

### PMAFS — Pharmacy Medicine Availability Finder *Ongoing*

*ASP.NET Core 10 + Angular 22 + PostgreSQL · github.com/kaluabiyu-wq/PMFApi · github.com/kaluabiyu-wq/Pmf-Clients-2*

- Independently designed and built a location-aware web platform that lets patients in Addis Ababa find which pharmacies stock a medicine, with distance-ranked search, orders, favorites, reviews and prescription upload — a practical solution to a real local problem.
- Built a four-project Clean Architecture API (Domain, Application, Infrastructure, API) with ~120 REST endpoints, EF Core on PostgreSQL, and JWT auth with role-based and policy-based resource authorization (pharmacy owner, document review, prescription verification).
- Implemented pharmacy onboarding with document verification, staff and opening-hours management, inventory with change history and an approval workflow, plus system-admin user/role management and reporting endpoints.
- Added SignalR live updates, in-app alerts, audit logging via an action filter, token-bucket rate limiting on auth endpoints, request logging, security-headers middleware and SMTP-based account recovery.
- Built the Angular 22 client with separate patient, pharmacy-staff, pharmacy-admin and system-admin areas, role and pharmacy-scope route guards, a JWT interceptor, an NgRx SignalStore for session and inventory state, and Vitest specs.

### Training Management System (TMS)

*ASP.NET Core 10 + Angular 22 + PostgreSQL · github.com/kaluabiyu-wq/TmsApi · github.com/kaluabiyu-wq/tms-clients2*

- Built a fullstack training/course-enrollment platform: layered Clean Architecture API (CQRS/MediatR, FluentValidation) on PostgreSQL, with versioned (v1/v2) endpoints, rate limiting, hybrid caching, and background workers for enrollment and transcript processing.
- Added SignalR real-time notifications, JWT auth with refresh-token rotation, course-instructor resource-based authorization, global exception handling and security-headers middleware.
- Built the Angular 22 client with role guards, JWT/error interceptors, and an NgRx SignalStore-driven dashboard for courses and enrollments.
- Covered the stack with xUnit API/unit tests, Vitest component/store specs, and a Playwright E2E suite.

### SkillBridge — Skills-Based Job Matching Platform *Hackathon*

*ASP.NET Core + Angular + PostgreSQL · github.com/Qiyas-Hackathon/SkillBridge · Qiyas Hackathon, team of 6 (3 backend, 3 frontend)*

- Backend developer on a job-matching prototype that ties candidates and employers to a shared skills catalog, so candidates see which jobs fit their skills and employers see who fits their roles.
- Built the .NET API with Clean Architecture and CQRS: each use case is a MediatR command/handler, with FluentValidation in a pipeline behavior so invalid requests never reach handlers.
- Modeled a shared Skill entity linked to candidates and jobs through join tables to enable skill-based matching; jobs are soft-deleted via an IsDeleted flag to preserve related data.
- Implemented ASP.NET Core Identity + JWT authentication with Candidate and Employer roles, and a centralized exception middleware returning consistent API errors.
- Agreed an API contract early so the Angular team could build candidate, company and admin areas in parallel with the backend.
