EDUCATION

Admas University
BSc, Computer Science
2022 – March 2026
GPA 3.63 — Great Distinction
National Exit Exam: 69/100 — March 2026 GC

TECHNICAL SKILLS

FRONTEND
TypeScript · JavaScript · Angular · React · Vite · HTML / CSS · NgRx SignalStore · Route guards · HTTP interceptors · Responsive design

MOBILE
Flutter · Dart · BLoC · go_router

BACKEND & APIS
C# / .NET 10 · ASP.NET Core · REST API design · Entity Framework Core · JWT & Identity · SignalR · Clean Architecture · CQRS

DATABASE
PostgreSQL · Database design · Data models

TOOLS & TESTING
Git & GitHub · Docker Compose · xUnit · NSubstitute · Vitest · Playwright · Node.js · Vercel · Render

SOFT SKILLS

Communication · Teamwork & Collaboration · Problem-Solving · Self-Directed Learning · Time Management · Attention to Detail

QIYAS TRAINING

Qiyas Fullstack Development Training
May 21 – Sep 24, 2026
C# 14/.NET 10, TypeScript, Angular, Git, ASP.NET Core, EF Core, PostgreSQL

CERTIFICATIONS

JavaScript Algorithms & Data Structures
freeCodeCamp · Oct 2025 · ~300 hours

Responsive Web Design
freeCodeCamp · Mar 2024 · ~300 hours

LANGUAGES

Amharic — Native
English — Professional

Available upon request

KALU ABIYU

Full-Stack Developer — .NET, Angular & PostgreSQL

PROFILE

Computer Science graduate (BSc, Admas University, March 2026, GPA 3.63 — Great Distinction) who builds complete applications from the database to the user interface. Delivered five projects: three fullstack ASP.NET Core + Angular systems on PostgreSQL with authentication, role-based access, real-time updates, caching and automated tests, plus a React e-commerce app and a Flutter mobile app. Uses Git and GitHub for every project, agrees API contracts early so frontend and backend can be built in parallel, and learns new tools independently. Open to junior full-stack roles (remote, hybrid or onsite; open to relocation). Available immediately.

PROJECTS

PMAFS — Pharmacy Medicine Availability Finder *Ongoing*

ASP.NET Core 10 + Angular 22 + PostgreSQL · github.com/kaluabiyu-wq/PMFApi · github.com/kaluabiyu-wq/Pmf-Clients-2

- Independently designed and built a location-aware platform that shows patients in Addis Ababa which pharmacies have a medicine in stock right now, with prices, distance-ranked search, a stock-reliability ranking, orders, favorites, reviews and prescription upload.
- **Backend:** four-project Clean Architecture API (~120 REST endpoints, EF Core on PostgreSQL), JWT auth with role- and policy-based authorization, location records (subcity, woreda, coordinates), an inventory-history audit trail with approval workflow, pharmacy document verification, SignalR live updates, token-bucket rate limiting, security-headers middleware and SMTP account recovery.
- **Frontend:** Angular 22 client with separate patient, pharmacy-staff, pharmacy-admin and system-admin areas, role and pharmacy-scope route guards, a JWT interceptor, an NgRx SignalStore for session and inventory state, and Vitest specs.

Training Management System (TMS)

ASP.NET Core 10 + Angular 22 + PostgreSQL · github.com/kaluabiyu-wq/TmsApi · github.com/kaluabiyu-wq/tms-clients2

- Built a fullstack platform for scheduling, tracking and managing training programs and enrollments: layered Clean Architecture API (CQRS/MediatR, FluentValidation) on PostgreSQL with versioned (v1/v2) endpoints, RFC 9457 ProblemDetails errors, rate limiting, hybrid caching and background workers.
- Added SignalR real-time notifications, JWT auth with refresh-token rotation, resource-based authorization, global exception handling and security-headers middleware.
- **Frontend:** zoneless Angular 22 client using signals and an NgRx SignalStore, with role guards and JWT/error interceptors. **Testing:** xUnit API/unit tests, Vitest component/store specs and a Playwright E2E suite (enrollment approval and a forced-500 failure path).

SkillBridge — Skills-Based Job Matching Platform *Hackathon*

ASP.NET Core 10 + Angular 22 + PostgreSQL · github.com/Qiyas-Hackathon/SkillBridge · Qiyas Hackathon, Team 23 (3 backend, 3 frontend)

- Backend developer on a job marketplace connecting candidates and employers through skill-tagged jobs, applications with status tracking and an admin console; owned authentication, authorization and API design.
- Built the API with Clean Architecture and CQRS (MediatR commands/handlers, FluentValidation in a pipeline behavior); modeled skills as a many-to-many relationship so candidates and jobs share one skills catalog.
- Implemented ASP.NET Core Identity + JWT with Candidate, Employer and Admin roles (admin seeded on startup) and centralized exception middleware; agreed the API contract early so the Angular team could build in parallel.

Shop — Online Store

ASP.NET Core 8 + React 18 + PostgreSQL 16 · github.com/kaluabiyu-wq/Shop

- Built a full-stack e-commerce app for Ethiopian traditional and modern clothing: server-side search, category filter, sorting and paging, persistent cart, checkout, order history, cancellation with stock restore, and an admin area for products and orders.
- Prevented overselling with PostgreSQL xmin optimistic concurrency and transactional stock decrement; locked unit prices at purchase time; JWT auth with BCrypt-hashed passwords and Customer/Admin roles; Swagger docs and Docker Compose for one-command setup with seeded demo data.

Mini-Market — Flutter Mobile App

Flutter + Dart + flutter_bloc + go_router · github.com/kaluabiyu-wq/Mini-Market

- Built a cross-platform shopping app (Android, iOS, web and desktop from one codebase) with category browsing, search, sorting, pagination, favorites, a quantity-based cart and in-app product management.
- Used separate ProductBloc and CartBloc for predictable state, a cart that re-syncs when products are edited or deleted, and go_router with a ShellRoute for shared bottom navigation.
