SKILLS

- C# / .NET 10, ASP.NET Core
- Entity Framework Core
- PostgreSQL & database design
- Angular, TypeScript
- JavaScript
- REST API design
- SignalR & real-time systems
- Clean Architecture, CQRS
- Git

EDUCATION

Admas University

BSc, Computer Science

2022 – 2026

GPA 3.63 — Great Distinction

National Exit Exam: 69/100 — March 2026 GC

CERTIFICATIONS

JavaScript Algorithms & Data Structures

freeCodeCamp, 2025

Responsive Web Design

freeCodeCamp, 2024

KALU ABIYU

Fullstack .NET + Angular Developer

PROFILE

Fullstack developer building production-style applications end-to-end on the .NET and Angular stack, from API and database design through to the client. Recently completed a BSc in Computer Science with Great Distinction, and currently enrolled in the Qiyas fullstack training program, deepening hands-on skills across C#/.NET, ASP.NET Core, EF Core, PostgreSQL, and Angular. Alongside training, has spent the past several months building two independent, production-scale systems covering Clean Architecture, CQRS, real-time features with SignalR, JWT-secured APIs, and zoneless Angular clients with signals and NgRx SignalStore. Strong, consistent interest in system and database architecture — actively seeking junior fullstack roles working with .NET and Angular.

PROJECTS

Training Management System (TMS)

Ongoing

ASP.NET Core 10 + Angular 22 · github.com/kaluabiyu-wq/TmsApi · github.com/kaluabiyu-wq/tms-clients2

- Built a fullstack training/course-enrollment platform: layered Clean Architecture API (CQRS/MediatR, FluentValidation) on PostgreSQL, with versioned (v1/v2) endpoints, rate limiting, hybrid caching, and background workers for enrollment and transcript processing.
- Added SignalR real-time notifications, JWT auth with refresh-token rotation, and course-instructor resource-based authorization, plus global exception handling and security-headers middleware.
- Built the Angular 22 client with role guards, JWT/error interceptors, and an NgRx SignalStore-driven dashboard for courses and enrollments.
- Covered the stack with xUnit API/unit tests, Vitest component/store specs, and a Playwright E2E suite.

PMAFS — Pharmacy Medicine Availability Finder

Ongoing

ASP.NET Core 10 + Angular 22 + PostgreSQL · github.com/kaluabiyu-wq/PMFApi · github.com/kaluabiyu-wq/Pmf-Clients-2

- Independent project: a location-aware platform tracking pharmacy medicine stock across Addis Ababa, built as a four-project Clean Architecture API with resource-based authorization and audit logging.
- Built the matching Angular 22 client with role-based dashboards for patients, pharmacy staff, and admins, covering medicine search, inventory management, and paginated listings.
- Added a pharmacy verification workflow, favorites/reviews, user feedback, and reporting endpoints for stock and pricing analytics.
